

### AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings of claims in this application:

1. (currently amended)      An injection molded object comprising:  
  
        a lactic acid based resin; and  
  
        a metal hydroxide in a ratio of 5 to 40 mass parts per 100 mass parts of the lactic acid based resin,  
  
        wherein the metal hydroxide is surface-treated ~~with  $\text{Na}_2\text{O}$~~  and  $\text{Na}_2\text{O}$  (w- $\text{Na}_2\text{O}$ ) present on a surface of grains of the metal hydroxide is 0.1 mass% or less, but more than 0% based on the total mass of the metal hydroxide.
2. (previously presented)      The injection molded object according to claim 1, further comprising an aliphatic polyester other than the lactic acid based resin in a ratio of 20 to 80 mass parts per 100 mass parts of the lactic acid based resin.
3. (previously presented)      The injection molded object according to claim 1, further comprising an inorganic filler in a ratio of 1 to 20 mass parts of the lactic acid based resin.
4. (previously presented)      The injection molded object according to claim 1, wherein the metal hydroxide is surface-treated by at least one coating selected from the group consisting of a higher fatty acid, a silane coupling agent, a titanate coupling agent, nitrate, sol-gel, silicone polymer and resin.
5. (previously presented)      The injection molded object according to claim 1, wherein the injection molded object has a degradation ratio of 10% or less and an impact resistance of 5 kJ/m<sup>2</sup> or more.

6. (previously presented)      The injection molded object according to claim 1, further comprising an aromatic-aliphatic polyester in a ratio of 20 to 80 mass parts per 100 mass parts of the lactic acid based resin.
